**JAKARTA E-MOBILITY EVENT, IN SUPPORT OF JAKARTA'S COMMITMENT TO ELECTRIC PUBLIC
TRANSPORTATION**

JAKARTA - Jakarta has been selected to the host Urban 20 (U20), a series of events for leaders of the G20 Cities that aims to respond to the climate crisis by championing and accelerating the transition of carbon-neutral, inclusive, and resilient societies. A significant emphasis is placed on energy transition to achieve such goals since it is crucial to reduce greenhouse gas emissions and mitigate the effects of the climate crisis. In doing so, this energy transition must also prioritize sectors that highly contribute to greenhouse gas emissions, such as the transportation sector, which contributes to 28% of energy-related GHG emissions and 45% of final energy consumption in Indonesia in 2018.

The migration to electric vehicles is essential in Jakarta's air quality action plan, both to decarbonize the transport sector and to reduce air pollution. Jakarta's Governor, Anies Baswedan, champions in introducing of electric vehicles in Jakarta by envisioning to completely 'electrify' public transportation in Jakarta. Under his leadership, Jakarta has made several commitments to accelerate the transition in adopting electric vehicle, such as DKI Jakarta's C40 Green and Healthy Street: Fossil Fuel Free Street Declaration to only procure a zero-emission bus fleet by 2025 and gradually switch 50% of the Transjakarta's fleet by 2025. As part of the province's climate-resilient, low-carbon development plan, BRT electrification has also been mandated in Jakarta Governor's Regulation No. 90/2021. The initiative is in line with Indonesia's goal to become a major player in producing and operating electric vehicles as sustainable and clean transportation mode through the issuance of Presidential Decree No. 55/2019 on Acceleration of Battery Electric Vehicle Programs for Road Transportation in 2019.

Technical Assistance Programs to Support DKI Jakarta's Commitment

To support of DKI Jakarta's commitment, a number of technical assistance programs have been conducted. The initiatives that have been done are as follows:

1. Asian Development Bank (ADB) developed a preliminary study for Transjakarta Corridor 1 & 6 Electrification
2. C40 Cities Finance Facility (CFF) supported the planning of Transjakarta 100 pilot e-buses
3. UN Environment Programme (UNEP) and Climate Technology Centre & Network (CTCN) supports the development of BRT and Non-BRT electrification roadmap through a study by ITDP
4. UK Partnering for Accelerated Climate Transitions (UK PACT), funded by the UK Government's Department for Business, Energy and Industrial Strategy (BEIS) through the UK's International Climate Finance (ICF), supports the development of Transjakarta's large-scale electrification action plan and roadmap, focusing on the microbus through a study by ITDP
5. Transformative Urban Mobility Initiative (TUMI) E-bus Mission, funded by the German Federal Ministry for Economic Cooperation and Development (BMZ), supports the Transjakarta 100 pilot e-buses monitoring and evaluation and develops peer-to-peer knowledge sharing network, and conducts route level analysis of bus energy consumption.

High-Level Event to Accelerate Transjakarta Electrification

To support the electrification of Transjakarta's bus project, DKI Jakarta with ITDP, UK PACT, C40-CFF, TUMI Initiative, UNEP, CTCN, ICCT, and KPBB are conducting E-Mobility Event filled with webinars, workshops, and capacity buildings. The event opened by DKI Jakarta's Governor, Anies Baswedan; Special Advisor to the Minister of Energy and Mineral Resources for Industry Development Acceleration, Agus Tjahajana Wirakusumah; Head of Mission for British Embassy Jakarta, Rob Fenn; Ambassador of the Federal Republic of Germany to Indonesia, ASEAN, and Timor-Leste, Ina Lepel; Ambassador of Sweden to Indonesia, Marina Berg; CEO of Institute for Transport and

Development Policy (ITDP), Heather Thompson.

“Jakarta E-Mobility Event” begins with a keynote webinar accessible to the public through the DKI Jakarta Government YouTube channel on March 1st, followed by series of webinars and workshops for stakeholders on March 2nd, 9th, and 16th. This series of events aims to increase of various stakeholders involved in the project, including Transjakarta, city officials, Original Equipment Manufacturers (OEMs), operators, and public in general. Webinars and workshops will discuss: (1) Global case studies and Indonesian policy review on electric bus deployment, (2) Technology selection and business model for electric buses, (3) Findings dissemination to city-level governments. This document will outline the terms of reference of the DKI Jakarta’s Commitment to Electrify Public Transport Fleets and Current Efforts.

Governor of DKI Jakarta, Anies Baswedan, said Jakarta has accelerated its vision to establish clean mobility by pledging to shift Transjakarta fleets to electric buses in Fossil-Fuel-Free-Streets pledge as a C40 city and Jakarta’s Climate Resilient Low Carbon Development Plan. “In the light of the IPCC 2022 report, where we all have to accelerate the net-zero transition, this week Jakarta will begin to operate the pilot phase of electric buses deployment under the Transjakarta system. By starting our shift to electric vehicles from public transport fleets that individually have significantly higher daily kilometers traveled than private vehicles. Electrifying more than 4,000 units of Transjakarta fleets can also provide the large demand needed by the domestic bus manufacturing industry to achieve economies of scale. These all make the electrification of public transport can kickstart the national transition to electric vehicles implementation, and Jakarta is eager to lead the movement,” he said.

Special Advisor to the Minister of Energy and Mineral Resources for Industry Development Acceleration, Agus Tjahajana Wirakusumah, said the Battery Electric Vehicle (BEV) program will increase the country’s energy security by reducing dependence on imported fuels as well as reducing GHG emissions to achieve net-zero emission target. “It is also necessary to utilize local, new, renewable energy sources for electricity generation by BEVs. Taking advantage of the momentum of the G20 Presidency of Indonesia, I hope through this Jakarta E-mobility Event innovative ideas can be generated to improve the electrification of public transportation in all cities in Indonesia, as well as increase the capacity of various stakeholders and strengthen all communication and collaboration between stakeholders.”

Deputy Head of Mission to Indonesia and Timor-Leste, British Embassy Jakarta, Rob Fenn, said the UK Governments continues to support DKI Jakarta in achieving its net-zero target by 2050 including through accelerating e-buses and e-two-wheelers deployment in the city. “Through technical assistances, collaboration, and diplomatic efforts, we are keen to see the metropolitan city become a model city for Indonesia in terms of delivering ambitious climate agenda and moving toward a sustainable future city.”

Ambassador of the Federal Republic of Germany to Indonesia, ASEAN, and Timor-Leste, Ina Lepel, said achieving the ambitious target of the Paris Agreement cannot be achieved by one country alone – it requires a massive and coordinated effort internationally, and transformations of the economics in countries. “Germany is committed to working closely with Indonesia to support a low carbon, sustainable transportation, and clean energy to reduce GHG emissions and provide cleaner air and improved health of citizens. We support Jakarta’s commitment through two cooperation projects in e-mobility development: the C40-CFF and the TUMI E-bus Mission. I am very much looking forward to seeing zero-emission public transport operating on the streets of Jakarta as a bright example of local climate action.”

Ambassador of Sweden to Indonesia, Marina Berg, said Sweden and Indonesia enjoy an excellent connection, and will continue to expand bilateral cooperations including in renewable energy, climate and environment, smart transportation, and blue economy. “The electrification of Jakarta’s bus system is one of the most ambitious and exciting programs for Indonesia’s development toward sustainability. Sweden declares its readiness to collaborate further with the Provincial Government of DKI Jakarta specifically in the public transport sector, through a technical advisory for preparing Transjakarta’s full fleet electrification under Swedfund, the development finance institution of the Swedish government.”

CEO of ITDP, Heather Thompson, said electrification must be combined with compact city development, public transportation, and walking and cycling to meet our 1.5oC target. “We still have to reduce the number of motorized vehicles and electrify the rest. If we focus our investment in electrifying public transit, we’ll maximize the benefits for the greatest number of people and for the climate – it is great to see that Jakarta has followed this recipe of success. It is an honor for ITDP to be providing support to the city of Jakarta in this transition to 100% clean and green electric public transit, and we are proud to share the lessons learned of Jakarta’s success with all of our partners in cities we support

worldwide.”

Lead Advisor Climate GIZ, Gerd Fleischer, said the C40-CFF project supported Transjakarta’s 100 pilot e-bus deployment to be a technically-sound, finance-ready project with a comprehensive social-benefit analysis. “One of the best practices we gathered is that establishing a permanent and institutionalized decision-making body – such as a Project Implementation Unit (PIU) – is key for leading such a complex transition to e-mobility.”

CTCN Program Officer, Sambit Nayak, said CTCN and UNEP through the Supporting Jakarta’s Transition to E-mobility project, implemented by ITDP, have developed recommendations on the road map and investment plan with business models and financing mechanisms for Transjakarta’s fleet electrification. “The technical assistance revealed a potential GHG reduction impact of around 10,000 tCO₂eq per annum from Transjakarta fleet electrification implementation. Following the mandates from COP26, UNEP/CTCN can support the leveraging of resources from climate finance to support implementation and scaling up the e-bus program in Jakarta.”

Head of TUMI E-Bus Mission, Jens Giersdorf, said in Jakarta, building up from previous supports, TUMI E-bus Mission supports the monitoring and evaluation of the upcoming pilot electric buses. “And, conducts a training needs assessment, route-level analysis of bus energy consumption, and develops peer-to-peer knowledge sharing network.”

ASEAN Regional Lead at the ICCT, Francisco Posada, said direct engagement and support at the city level are the keys to advancing vehicle electrification programs. “ICCT and KPBB are supporting the Government of Jakarta in developing route-level electric bus assessment in Jakarta.”

Executive Director of KPBB, Ahmad Safrudin, said 58.3% of the Jakarta population suffers from air-pollution-related diseases. “The electric bus is one of the mitigation measures to control the pollution and also GHG in Jakarta. However, since e-buses are comparatively more expensive than diesel buses, studies on the total cost of ownership and green public procurement are very important and we aim to provide support on those aspects.”
